

Pipe Puller

Laser-Friendly Pipe Installation

Advantages:

- **Convenient** - The Pipe Puller remains stationary in the "first" pipe until the cables are extended to their full length of 100 ft. This saves the time and energy of moving the pipe puller each time a new pipe is laid.
- **Frees Excavator To Dig Ahead** - Your excavator digs ahead while the Pipe Puller firmly joins several pipe sections, which minimizes grouting.
- **Reduces Pipe Breakage** - Minimizes pipe breakage with a more secure method of joining pipe sections.
- **Easy, One-Person Operation** - The Pipe Puller's 32 ft. control cable allows for operation from a safe distance outside the pipe. Includes a 15,000 lbs. winch. Add additional snatchblock for greater capacity.
